

Product and Brand Development Guide

Glint

A NEW CURRENT

GLINT begins with an unusual advantage: it is new, but it is not inexperienced. Behind it sits years of knowledge about making useful objects - materials, production, durability, temperature, vessels, and the practical realities of manufacturing. That knowledge is available to the new company, but the identity is not inherited with it. GLINT is intended to stand on its own, with a different audience, a different point of view, and a future that does not have to resemble the business that made its beginnings possible.

That separation matters. GLINT is not a younger-looking extension of an existing kitchenware line, and it is not a sub-brand created simply to enter another category. It is an independent company built around a different question: what should an everyday object feel like when technology is no longer the most interesting thing about it?

The answer begins with water, but not because GLINT wants to be defined by hydration. Water is useful here because it offers a way of thinking about change. It moves. It adjusts to its surroundings. It can be still, turbulent, contained, released, redirected, warmed, cooled, and carried. Its form changes without requiring it to become something else. The source can be inherited. The direction can be chosen.

For a new founder creating something separate from a family business, that idea carries particular weight. Growth does not require rejecting where something began. Independence does not require erasing what came before. The knowledge can travel forward while the identity takes another shape. GLINT begins from that freedom: a company with access to real making capability, but with the space to decide for itself what kind of relationship it wants to have with people.

That same idea will eventually become part of the relationship between GLINT and its customers. The company can create the system, but it does not need to control every expression of it. The product can offer a cue without prescribing the response. The object can be designed with rigor while still leaving room for the person to make it their own.

This guide presents GLINT as a proposed brand and product direction, exploring how design, technology, and personal experience can come together in a new independent venture. Product features, materials, and connected experiences are conceptual and subject to further engineering and production development.

CALM CAN HOLD CHANGE

Wellness is often pictured as order: a clean routine, a quiet room, a perfectly controlled environment, a body that behaves, a schedule that stays intact. GLINT starts somewhere else. Calm is not the absence of disruption. It is the ability to remain present while things change. That distinction creates a very different emotional territory for the brand. A person does not have to become stoic in order to be calm. They can notice frustration, excitement, fatigue, uncertainty, curiosity, or change without treating those feelings as failure. Life continues to move. The point is not to freeze the movement. The point is to meet it with enough awareness to choose what happens next.

GLINT is not designed around perfect routines or perfect stillness. It is designed for lives that move. Water becomes the natural metaphor. It does not remain calm because nothing touches it. It responds to what touches it. A current bends around an obstacle. A ripple carries outward. A vessel gives water a temporary form, but the water itself remains capable of movement.

This is the kind of calm GLINT is interested in: not stillness as control, but adaptability as confidence. That philosophy also changes the visual language. A calm brand does not have to be monochromatic, fragile, or afraid of contrast. Harmony does not require sameness. An unexpected color can enter the system without breaking it. A bright cup can sit on a muted bottle. A new combination can feel different without feeling wrong. Contrast becomes a symbol of change entering the picture - and being absorbed rather than resisted.

Calm can hold change.

A SMALL SIGNAL

GLINT's first product begins with a familiar object: an insulated drinking vessel. It can carry water, tea, coffee, broth, electrolytes, or something else entirely. It can keep a drink hot or cold. Its cap can become a cup. It is made to travel through work, commuting, movement, conversation, study, exercise, and the ordinary transitions of a day.

But the product is not differentiated by insulation alone. Its defining behavior is intentionally small. When a chosen reminder arrives, the illuminated point within the GLINT mark extends into a quiet sequence of glowing dots, while a ring at the base also lights up. A compatible wearable may offer an additional haptic cue. There is no screen on the bottle demanding attention, and no need for the object to become another device that expects to be managed.

A cue, not a command. That distinction is the center of GLINT's relationship with technology. Most notifications are built to capture attention and redirect it toward a system. GLINT is designed to do the opposite. It enters awareness briefly, then gives the decision back. The technology is useful precisely because it does not insist on becoming the focus.

The experience can be understood as a quiet sequence: notice, pause, replenish, return. Replenishment may be physical, emotional, social, or simply momentary. The reward does not need to be displayed as a badge, score, streak, or achievement. It is already present in the experience itself. GLINT doesn't give the person the reward. It gives them the moment in which they can find it.

The word return matters to GLINT, but not because the brand is interested in restoring people to an ideal state. The product is not asking anyone to become the person they were yesterday, the person they planned to be this morning, or the version of themselves described by an app.

GLINT isn't about returning to a fixed self. It's about returning to yourself as you are now. That may be the deepest expression of the brand. A pause can change something, even if only slightly. A person may return to work with more clarity, return to a conversation with more patience, return to movement with more energy, or simply return with a better sense of what they need next. The value is not in perfect consistency. It is in the ability to recognize the present and respond to it.

This is why personalization should be more than an accessory strategy. If GLINT believes in agency, the physical product should leave space for agency too. The customer should not have to accept a single approved expression of the object simply because the brand has decided that one combination looks most correct. The vessel can remain the constant while the cup becomes the variable. A bottle body may feel grounding and familiar; the interchangeable cup can introduce another color, another mood, another version. The combination may be tonal, contrasting, restrained, unexpected, or deliberately mismatched.

The system remains GLINT. The expression belongs to the person. GLINT provides the system. The person completes it.

RETURN, AS YOU ARE

AN OPEN PRODUCT SYSTEM

The product system begins simply. Each GLINT vessel can be sold with its primary cup-cap and a second cup in another color. Instead of treating the second piece as a spare, it becomes an invitation. From the first day, the object can have more than one expression. Additional cups can then exist as accessories rather than as decorative add-ons. They extend the life of the object and allow it to change with the person. A new color can mark a shift in taste, a season, a place, a memory, a gift, or no reason at all. The choice does not need to be justified. The act of choosing is enough.

This also creates a different kind of brand consistency. GLINT does not need every bottle in the world to look identical in order to remain recognizable. Consistency can live in form, material quality, proportions, the signal behavior, typography, mark, manufacturing standards, and the relationship between components. Variation can live in the combinations people create. GLINT controls the system, not the expression.

The packaging can reflect the same philosophy. It can remain calm and considered on the outside, then reveal an unexpected second color within. Opening the box becomes the first moment of choice. The customer encounters the object, then encounters possibility. The experience does not need to tell them which version is the real one. Both are real because both belong to them.

In this sense, customization is not a feature layered onto the product after the design is finished. It is part of the brand's point of view. A common everyday object becomes a small place to practice preference, ownership, and self-direction. That may appear minor, but the scale of the gesture is part of its value. GLINT does not need to transform someone's life in order to remind them that their choices still belong to them.

The category can change. The relationship can deepen. GLINT is built for movement: between places, between activities, between versions of ourselves. It does not promise that life will become orderly or that change will become easy. It offers something smaller and, perhaps, more useful: a quiet signal, a moment of choice, and an object that can change with the person carrying it. The current keeps moving. GLINT moves with it.

WHAT GLINT CAN BECO

The first vessel is important because it makes the philosophy tangible.
It turns ideas about attention, movement, choice, and change into something a person can hold. But the larger opportunity is not to build a company whose identity begins and ends with one smart bottle.

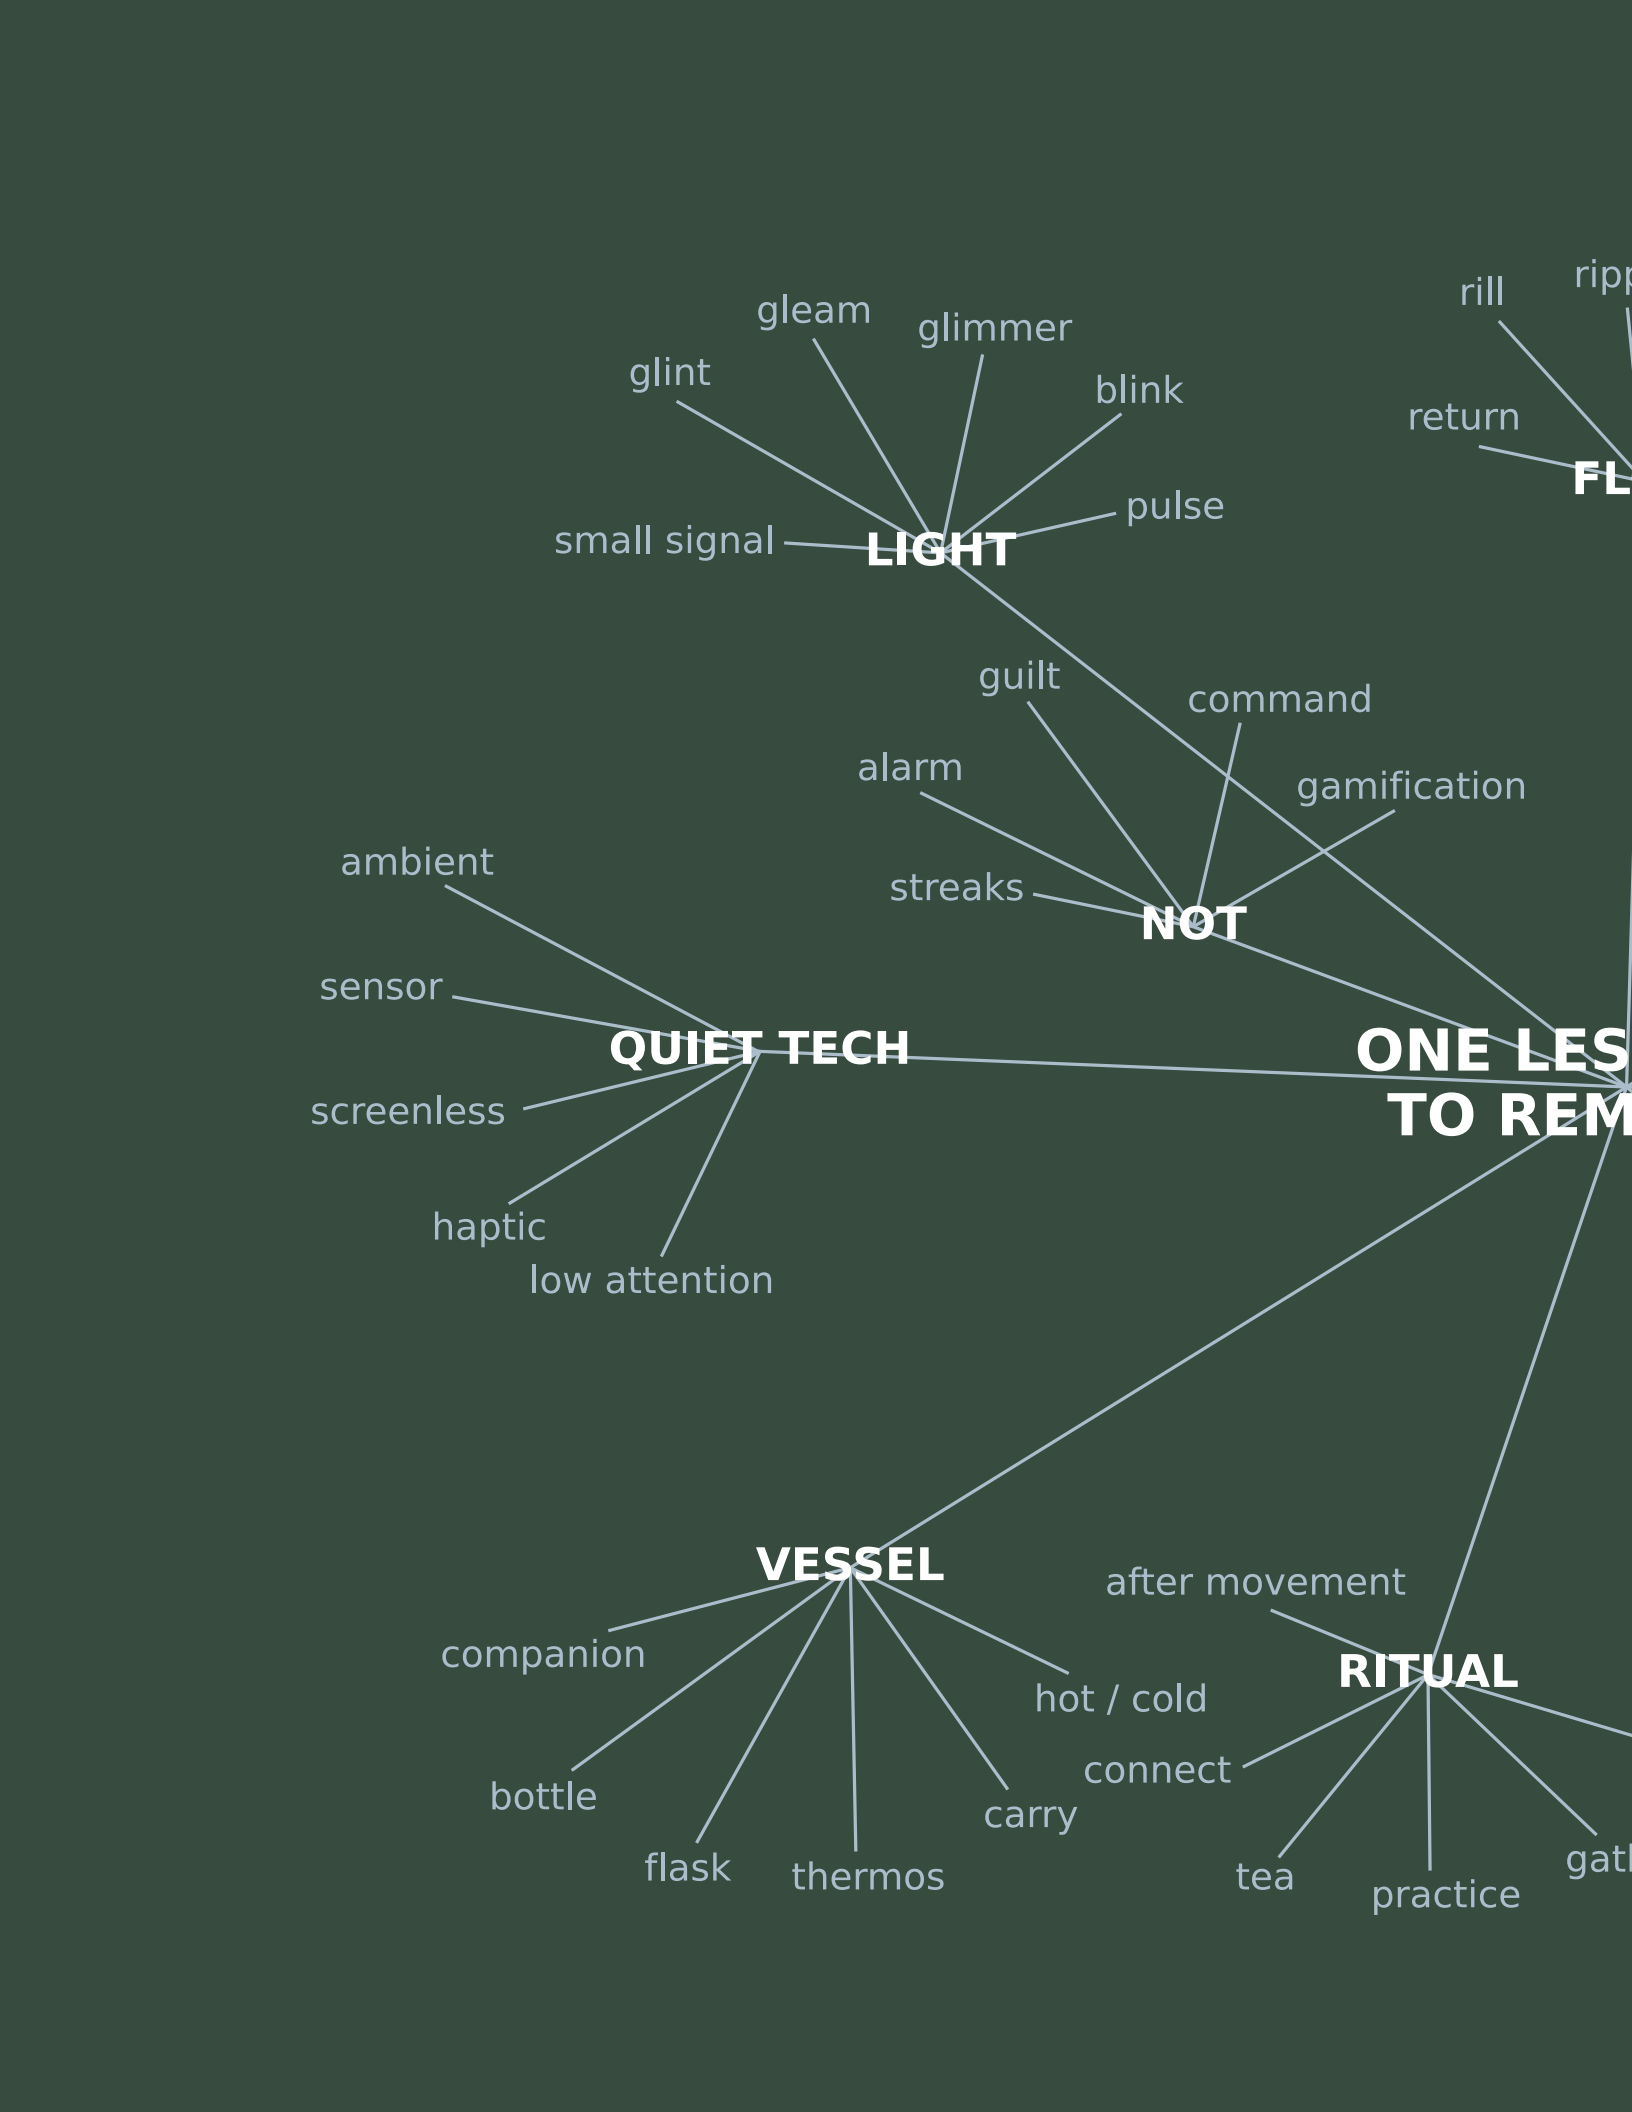

GLINT can become a company that designs quiet, adaptable objects for everyday wellbeing - objects that understand when to communicate and when to disappear, that respect the user's judgment, and that allow personal expression without sacrificing design integrity. The bottle is the first proof of that relationship. This future should unfold carefully. GLINT does not need to rush into a catalogue of connected products merely to appear larger. Its scale can come from clarity rather than quantity. Each new object should earn its place by answering the same questions: Does it reduce friction rather than create it? Does it support awareness without demanding attention? Does it leave room for the person? Can it adapt without losing itself?

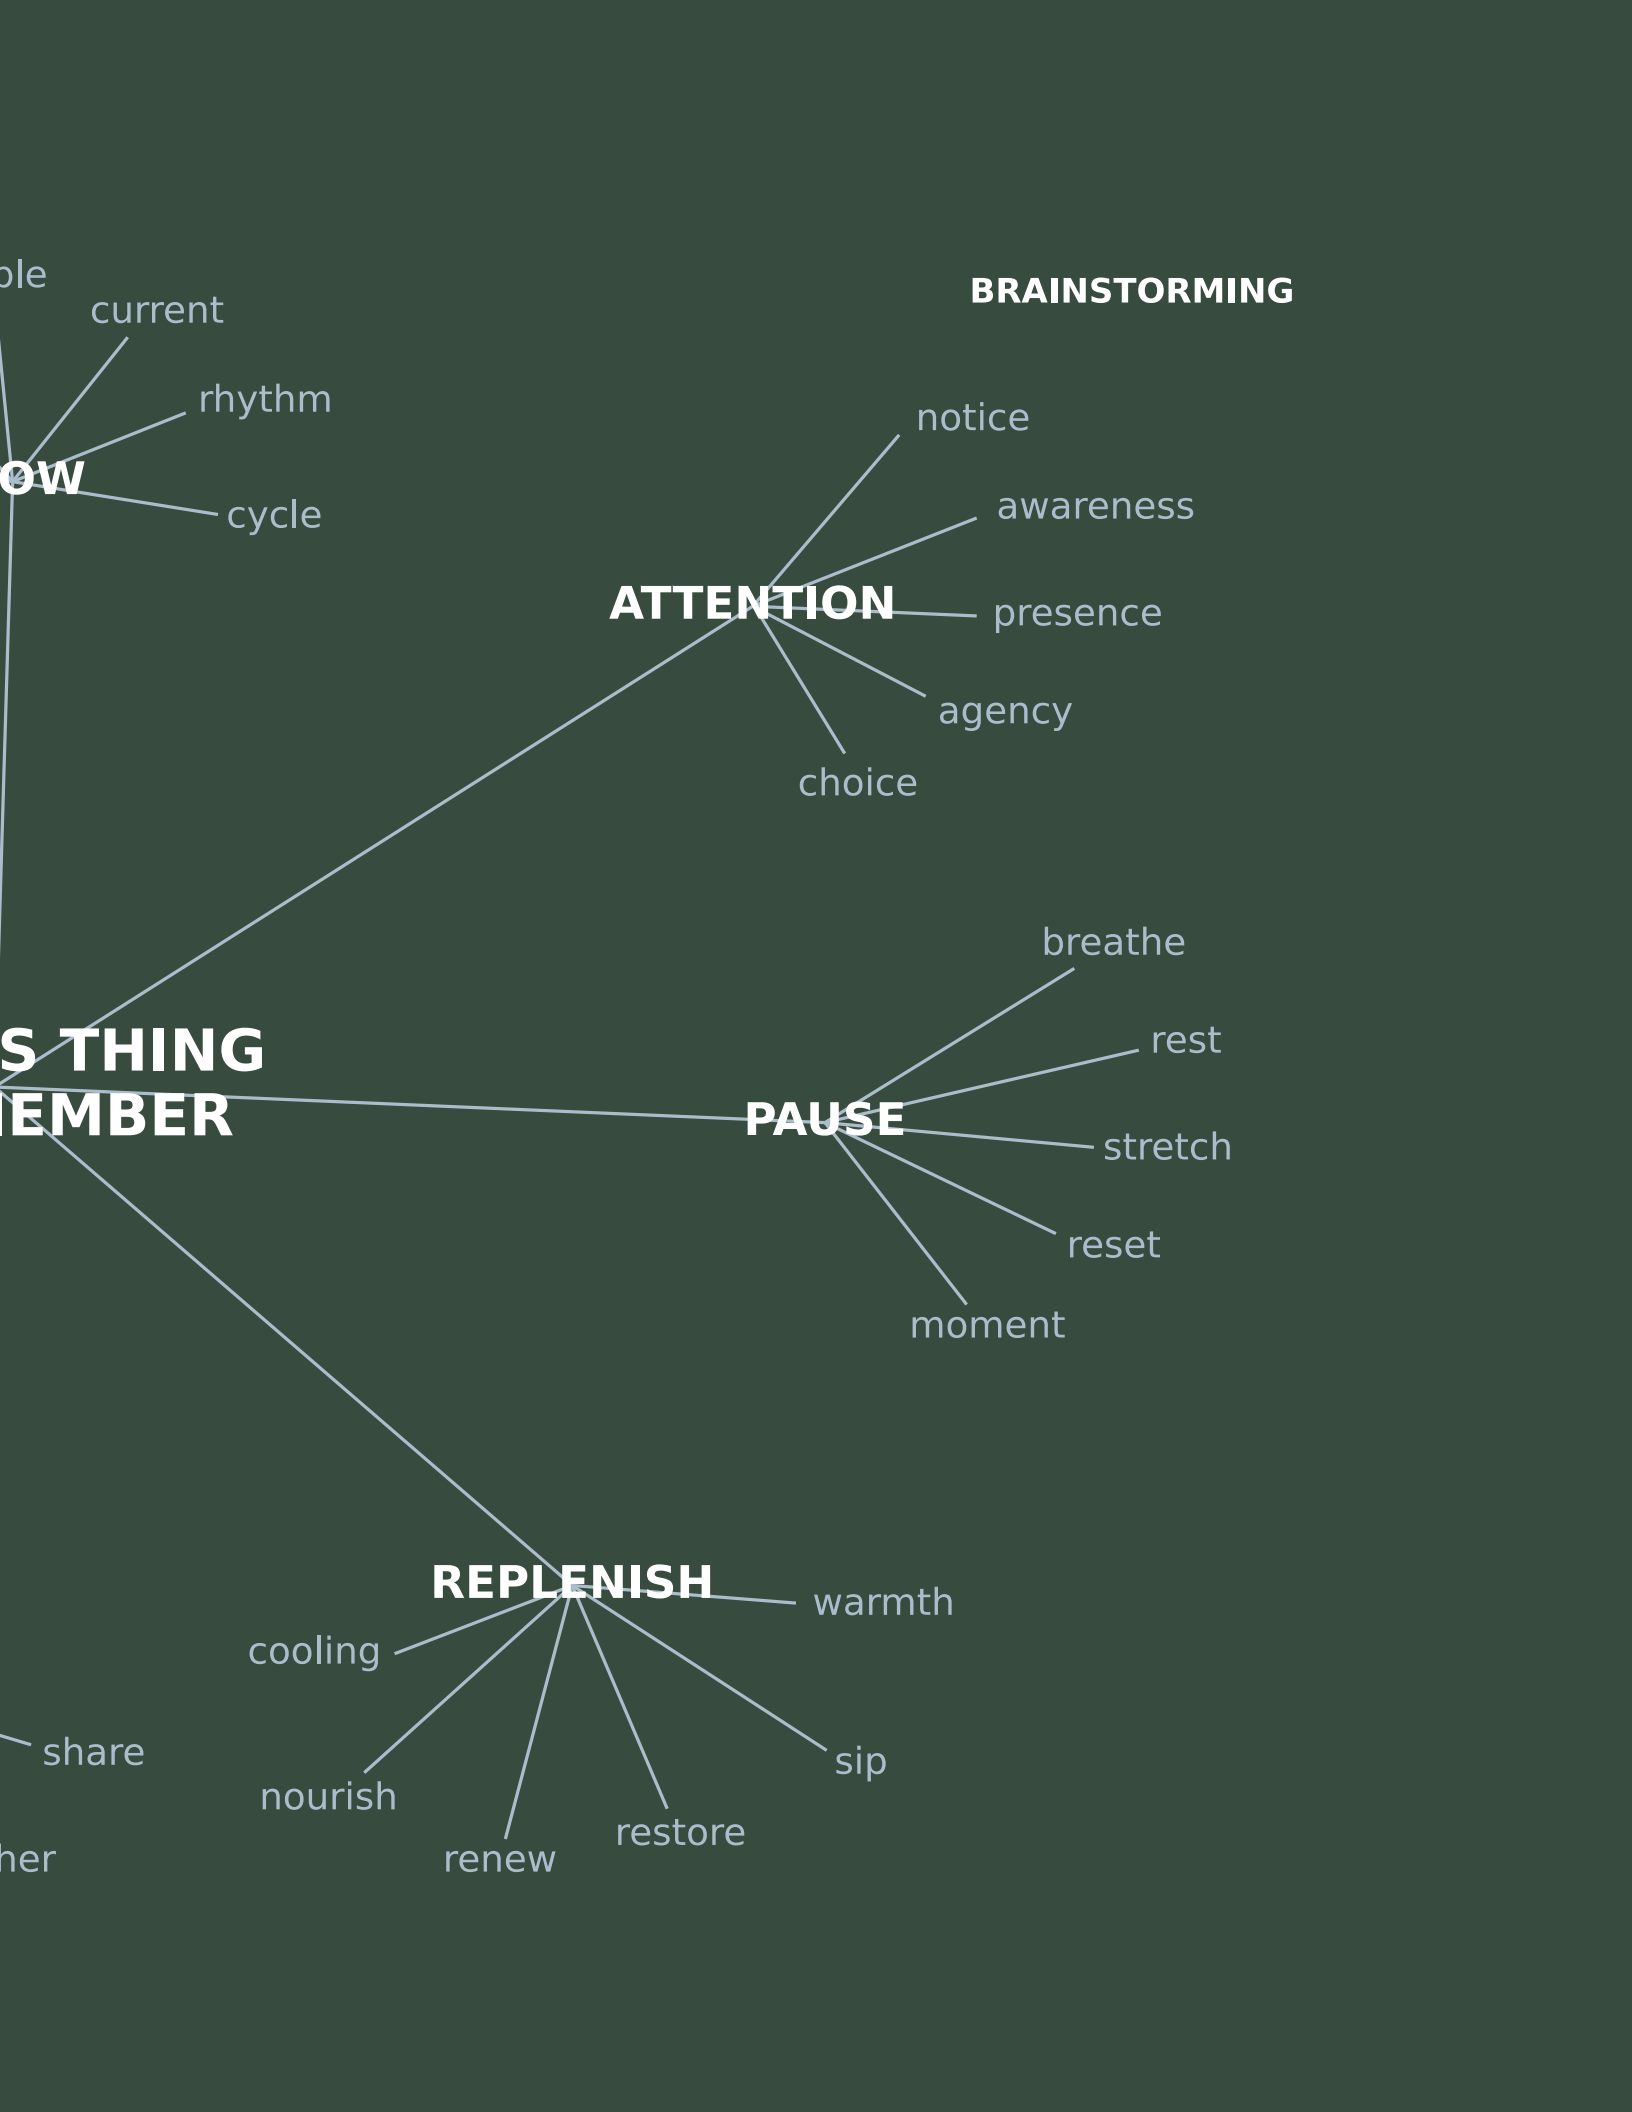

Quiet support can also extend beyond the moment of a reminder. A vessel moves through the day with the person carrying it, and what that person needs may change along the way. Someone may leave home with tea, finish it after an activity, and later want plain drinking water. GLINT can help at that practical moment too, through optional tools that make refill opportunities and local drinking-water information easier to find. The principle remains unchanged: technology becomes useful when requested, then steps out of the way.

That relationship can also extend beyond the moment of a reminder. The same vessel that accompanies a familiar routine may travel into circumstances the person cannot fully anticipate. Preparation can make an unfamiliar place easier to navigate, while access to useful information can help someone respond when plans change. Through optional connected services, GLINT could support both needs without assuming responsibility for every decision. The opportunity is not to manage the person's journey, but to make practical assistance available while leaving room for a different direction—or an unexpected possibility.

Those questions give the company a direction that is independent of the business that came before it. The manufacturing knowledge may be familiar. The category, language, behavior, and emotional relationship are new. That is exactly the point.

COLOR PALETTE

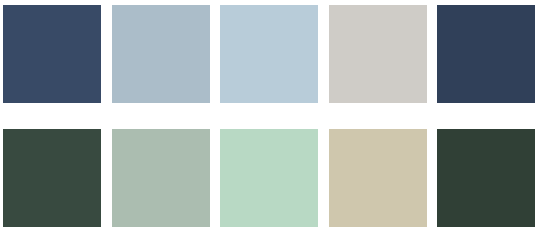

PRODUCT

FROM REMINDER TO COMPANION

GLINT's first product is designed as an everyday object that moves easily between work, travel, movement, rest, and the moments in between.
Its slim insulated body supports both hot and cold drinks, allowing water, tea, coffee, broth, electrolytes, or another personal choice to become part of the same daily object. The interior is envisioned around durable insulated stainless-steel construction, while the exterior takes its character from contemporary porcelain and ceramic objects — soft, tactile, refined, and intentionally less technical in appearance.

That versatility matters beyond the first fill. Someone may carry coffee to an early meeting, finish it on the way to an activity, and want plain water afterward. The drink can change without requiring a different vessel. GLINT is designed to accompany those transitions, allowing the object to remain familiar while the needs of the day continue to evolve.

A companion becomes especially useful when the day changes. Someone may leave home with coffee, finish it after an activity, and later want plain water. During a journey, the surroundings may change even more dramatically, bringing different routines, unfamiliar places, and experiences no itinerary could have predicted. GLINT remains a familiar object through those transitions. Its role is not to determine where someone goes, but to accompany them as their needs, choices, and experiences evolve.

At the top, the lid becomes a drinking cup. This simple transformation changes the familiar bottle experience from drinking directly from a spout into something more considered: remove, pour, hold, sip. The cup also becomes the most expressive part of the system. Because it can be interchanged across GLINT's color palette, the same bottle can shift in character without replacing the core object. Quiet combinations can sit alongside unexpected contrasts, giving each person the freedom to make GLINT feel increasingly their own.

The bottle remains familiar.
The expression can change.

THE MOMENT BETWEEN
G
lint

FROM SIGNAL TO SENSE

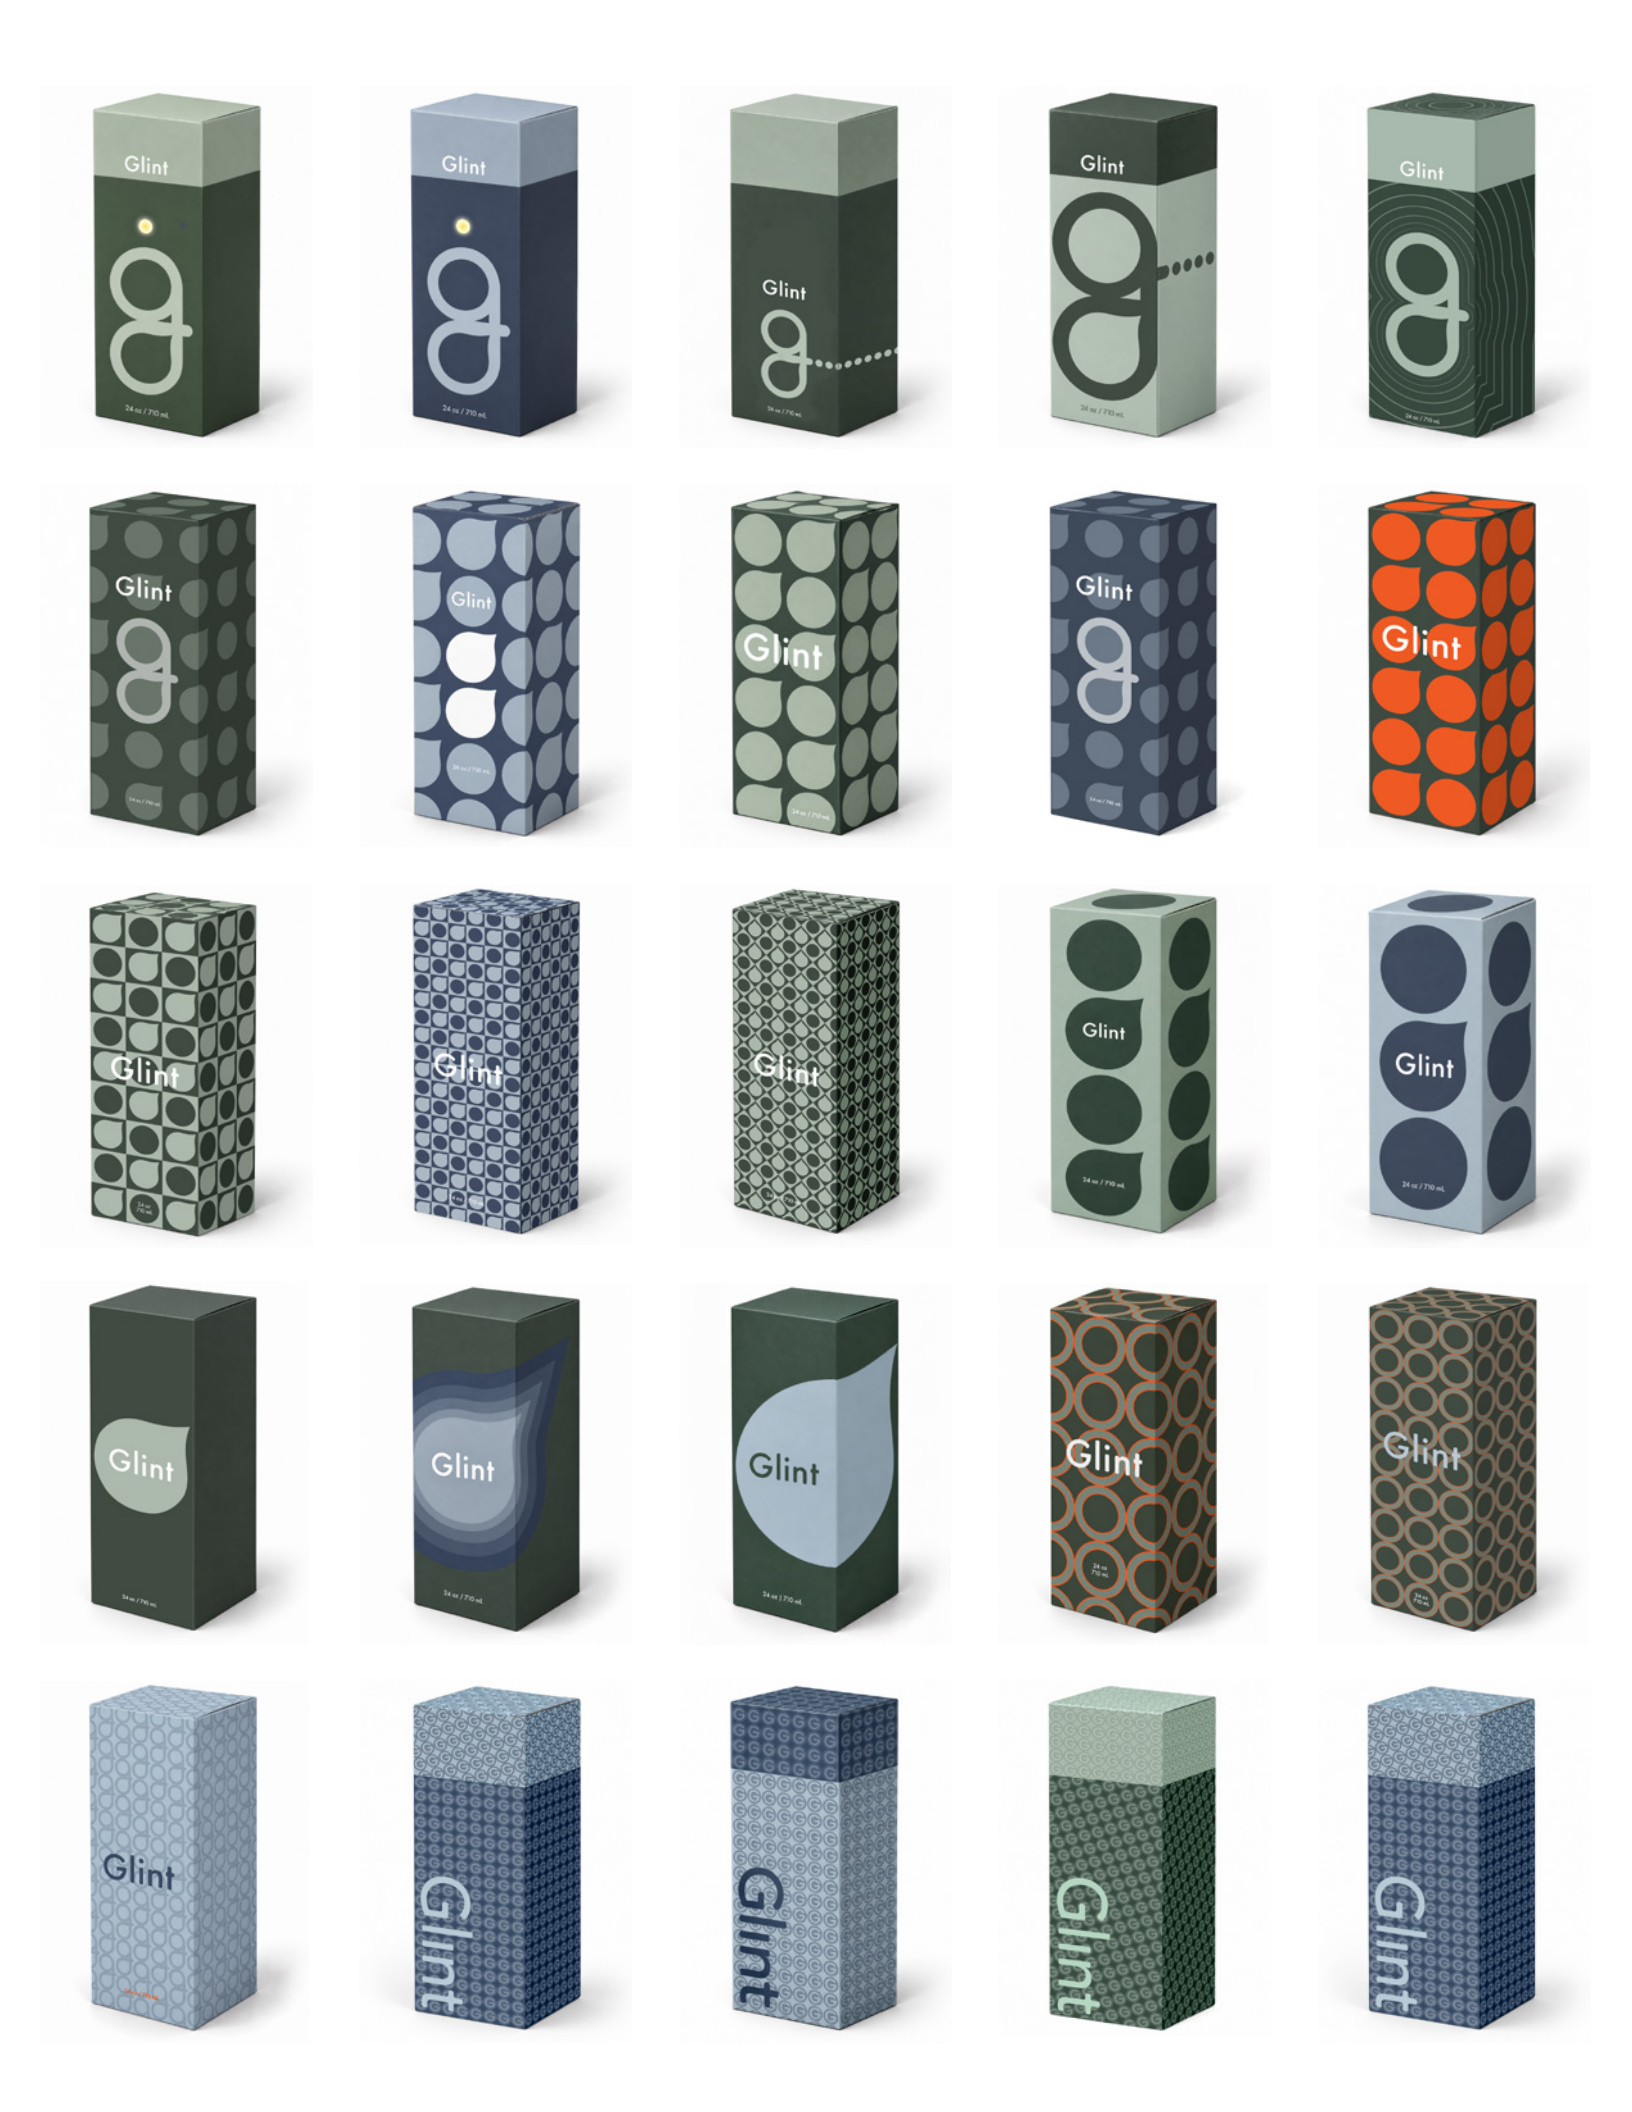

GLINT begins with a quiet visual language that can be as simple or as connected as the user wants it to be. When paired with the optional app, the bottle can be personalized through a phone or wearable device — from the reminder schedule itself to whether the visual light sequence or sound experience is activated at all. When a chosen reminder is enabled and that moment arrives, the bottle responds through light. The illuminated dot at the end of the g extends into a line of glowing points that wraps across the bottle, while the base ring also lights up. Together, these signals continue to blink until the reminder is dismissed from the paired phone or wearable device.

This visual cue is designed to be noticeable without becoming aggressive. It does not behave like a command or alarm. It simply creates an opening in the day — a moment to notice, pause, and decide what comes next.

Sound is also entirely optional. If selected in the app, removing the cup can open an additional sensory layer: moving water, ocean, rain, wind, soft resonance, or a personally selected soundscape. If sound is not selected, the bottle remains silent. The purpose is not to instruct or correct. It is to create a brief sense of separation from whatever came before: a moment to pour, breathe, sip, connect, or simply notice where you are.

The experience can be visual, auditory, both, or neither.

GLINT creates the opening. The moment belongs to you.

Glint

PACKAGING

FROM OBJECT TO CHOICE

GLINT's packaging extends the same principles as the product: quiet, considered, and open to personal expression.

The visual system begins with GLINT's grounded palette of deep greens, soft blues, and muted neutrals. Within that calm field, one complementary color is introduced: orange. It appears selectively—in pattern, detail, or even something as restrained as the 24 oz / 710 mL information. Orange represents the unexpected entering the system: energy, movement, interruption, possibility. The surrounding palette does not compete with it or erase it. It gives it space.

Calm can hold change.

Packaging becomes an appropriate place for that idea to live. It is, by nature, a container: something that protects, surrounds, and holds what is inside. For GLINT, it becomes a visual reminder that calm does not require sameness. It makes room for contrast.

THE OPEN S

ONE BOTTLE. MORE THAN ONE FORM.

Every GLINT package is designed to begin with choice.

Inside is one complete bottle and a second interchangeable cup in a contrasting color value. A bottle that arrives with a lighter cup may include a darker alternative; a darker combination may reveal something softer or lighter inside.

With one small change, the same object takes on a different character.

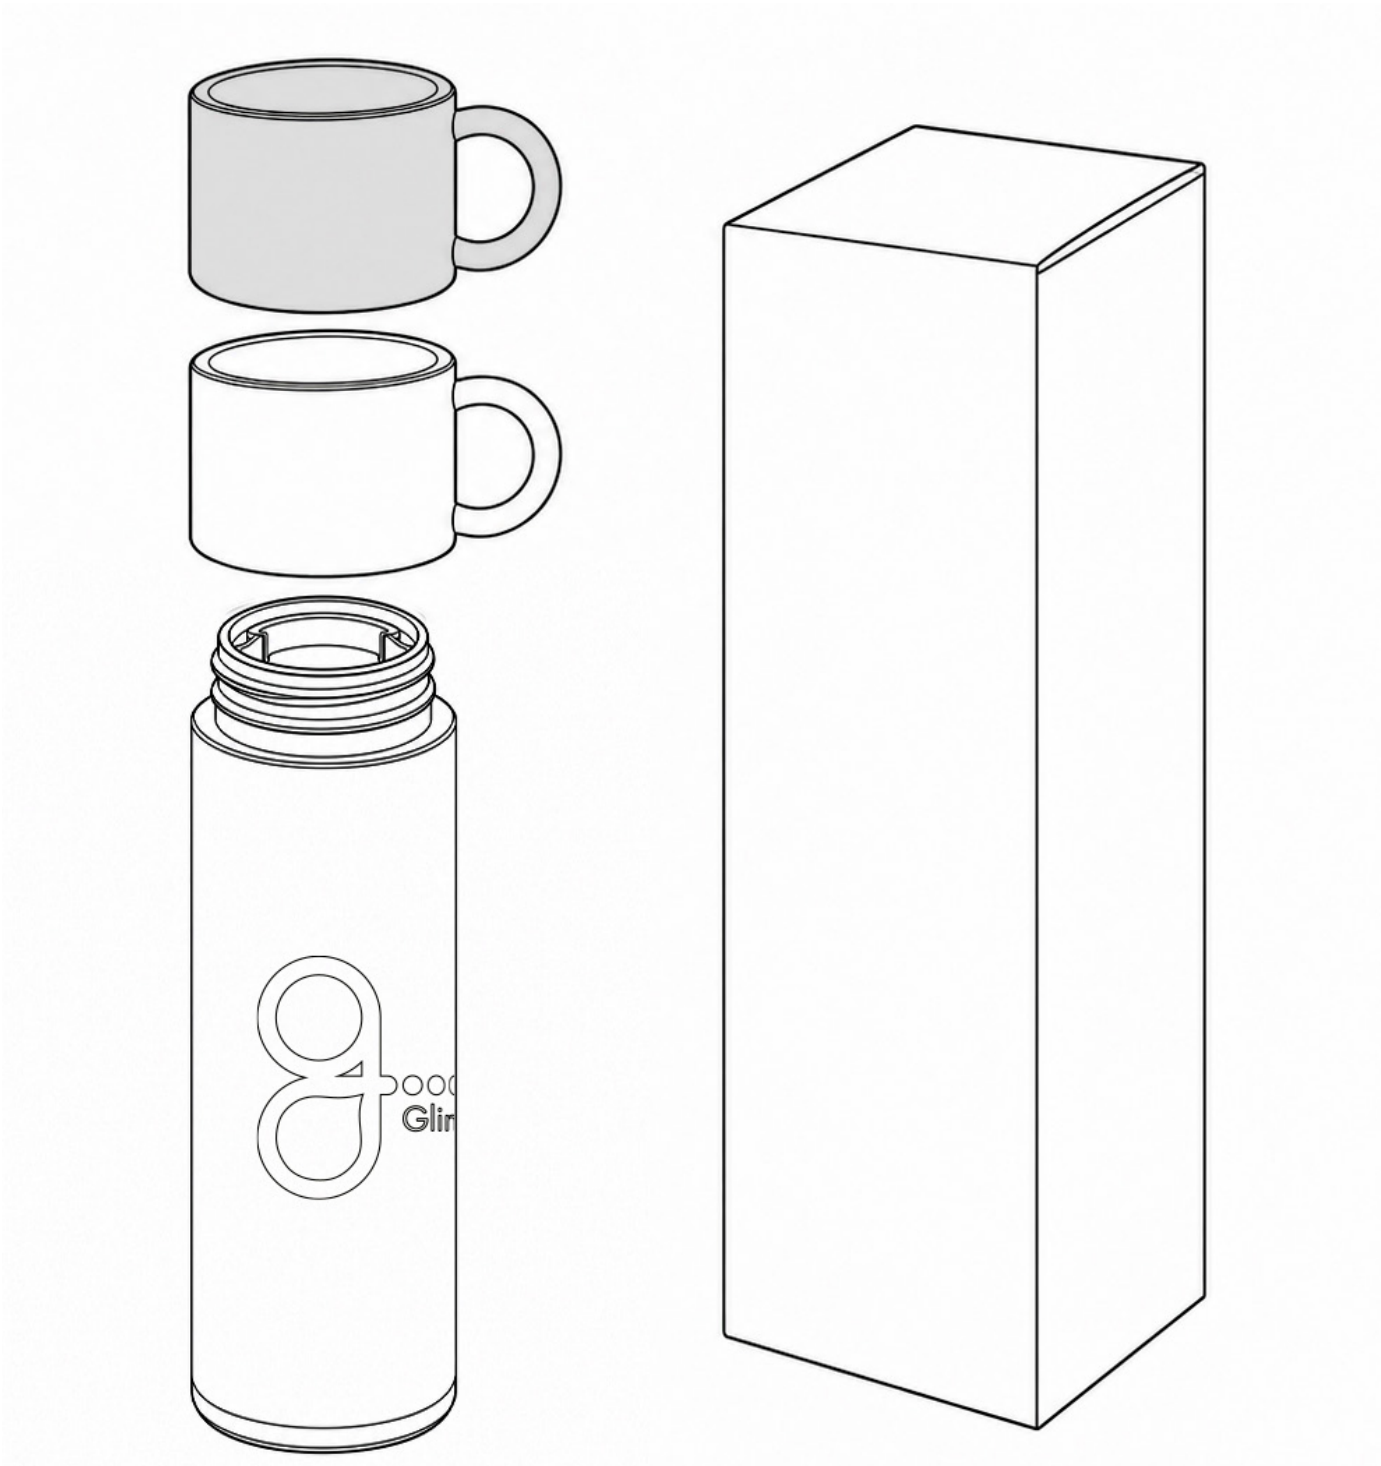

The additional cup introduces GLINT's modular system immediately—not as decoration, but as an invitation to make the product more personal. The bottle remains the constant. The expression belongs to the person carrying it.
Over time, additional cups can be offered individually as part of the GLINT accessory program. Each color is available on its own, allowing someone to choose precisely the piece they want, replace one when needed, or change the bottle as their taste changes.

Additional accessory cups are offered individually, without compulsory accessory multi-packs. Personalization should expand choice rather than create unnecessary purchasing obligations. The commercial system follows the same principle as the product: GLINT provides the possibilities. The person chooses what belongs to them.

The accessory program is therefore designed around choice and continued use, not collecting for its own sake. The core bottle remains useful while smaller components can change around it.

The bottle remains. The expression can change.

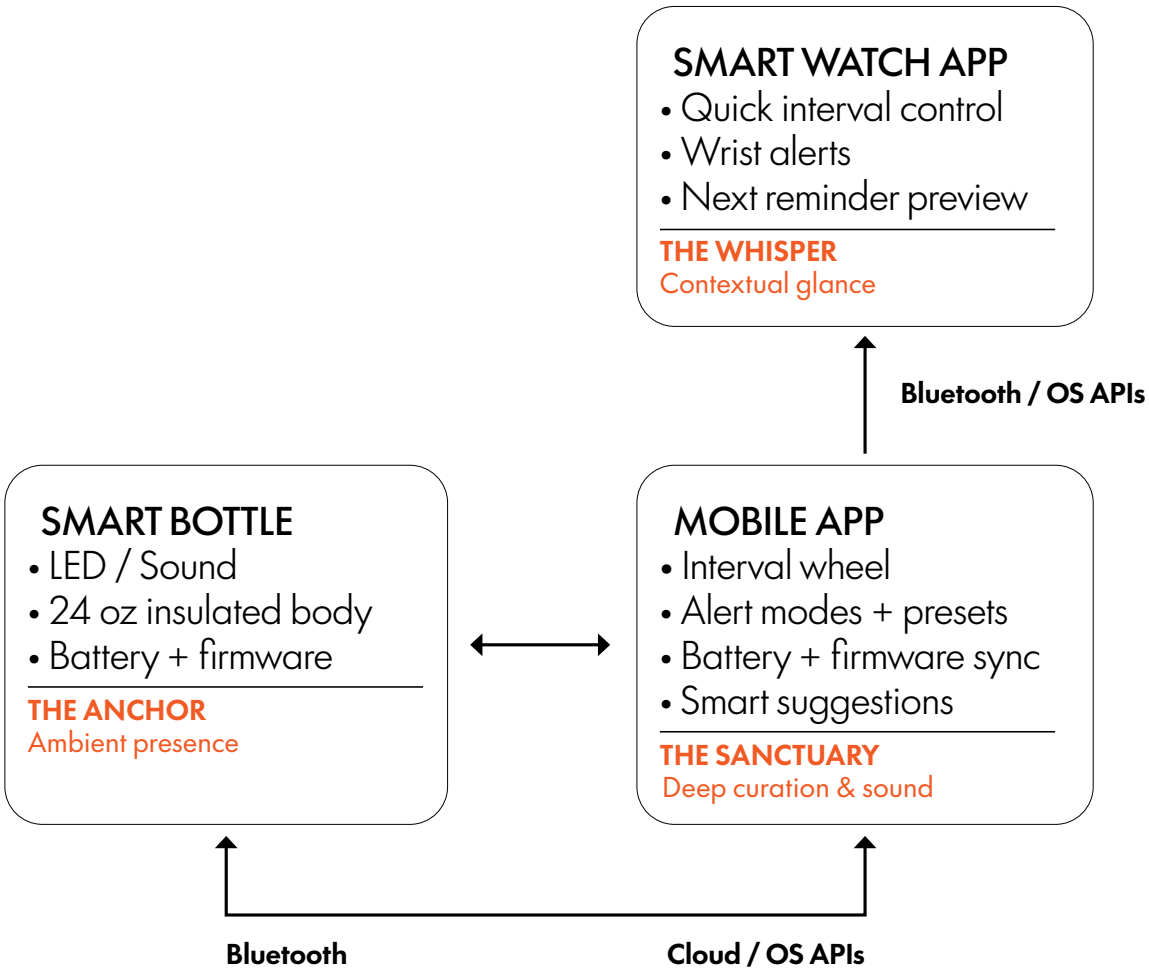

SYSTEM

THE EXPERIENCE, YOUR WAY

GLINT can remain entirely simple: a bottle, a cup, and the drink someone chooses to carry.
For those who want more, an optional connected layer allows the experience to become increasingly personal. Through the GLINT app, the bottle can pair with a phone or compatible wearable, allowing the person to decide when, how, and even whether GLINT gets their attention.
A reminder might be scheduled for a particular time, repeated at a chosen interval, or shaped around different parts of the day. There is no universal rhythm imposed by the product.
The person establishes their own.
When that chosen moment arrives, GLINT responds through light. Beginning at the illuminated point within the g, a sequence of light travels across the bottle while the base ring glows beneath it.
The signal continues gently until the reminder is acknowledged from the connected device.
For someone sitting at a desk, that device may be a phone. For someone running, training, practicing, walking, cooking, or moving through the day without a phone in hand, the same interaction can live on the wrist. In active moments, the wearable may be the most natural way to respond.

The technology is designed to meet the person where they already are. Light can be enough.

CONNECTED BY CHOICE

But GLINT can also allow the person to add sound.
When enabled in the app, removing the cup can become the trigger for a selected soundscape. Rather than a warning tone or electronic notification, the audio creates atmosphere around the moment that follows.
That sound might be moving water, ocean waves, rain, wind, leaves, soft resonance, harmonic textures, or a personally selected sound. Frequency-based tones such as 174 Hz, 396 Hz, 432 Hz, or 528 Hz can also be included as optional choices for people who already connect with those sound traditions.
GLINT does not assign one prescribed meaning or outcome to any sound.
The library simply offers different atmospheres for people to explore according to what feels right to them. One person may associate the ocean with home. Another may prefer a low tone before returning to work. Friends might choose rain while sharing tea after practice. Someone else may prefer complete silence.
The sound does not define the moment. It helps the person shape it.

There is something especially meaningful about the act of removing the cup.
The light is the invitation. Removing the cup becomes the response. Then, if sound has been selected, the atmosphere changes.
A small physical sequence begins: glint, notice, choose, open, experience, and return. The person might pour, breathe, sip, stretch, reconnect, or simply pause before continuing. Nothing else needs to happen.
The app is not designed to become another destination competing for attention. Once preferences are set, GLINT should be able to quietly follow them in the background. There is no need for a daily check-in. No streak. No score. No leaderboard. No pressure to optimize.

The app exists to shape the experience, not become the experience.
This extends GLINT's idea of personalization beyond color.
The bottle can already be made personal through the choice of body, cup, and drink. The connected layer adds another dimension: your time, your rhythm, your light, your sound, your device, your moment.

And just as importantly, the person can choose none of them.
GLINT can remain disconnected, silent, and simple.
That choice is part of the design.

It reminds. You decide.

Light or no light.
Sound or silence.
Phone or wrist.
Scheduled or spontaneous.
Connected or simply carried.
GLINT provides the possibilities.
The experience belongs to the person.

GLINT REFILL

FIND YOUR NEXT FILL

What someone needs from their drinking vessel can change throughout the day. A morning coffee may become plain water after an activity. A familiar routine may become an unfamiliar journey. In both situations, the next question may be the same: where can I refill?

GLINT REFILL extends the connected experience beyond reminders into practical, on-demand assistance. The proposed feature could help people explore reported public drinking-water points, participating refill locations, and relevant access information, whether they are moving around their own neighborhood or preparing to visit somewhere new.

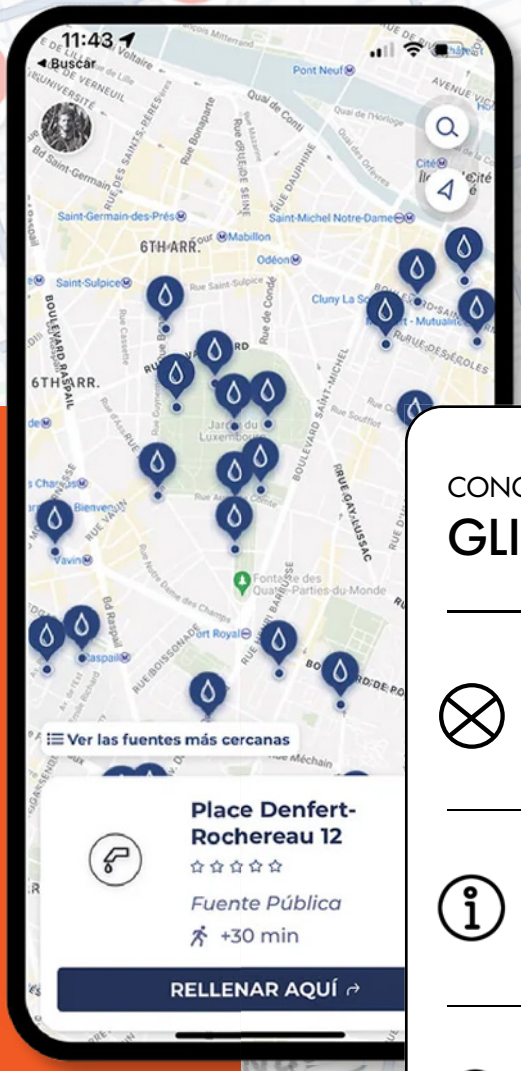

When traveling, the need for information may begin before departure. Drinking-water conditions, local infrastructure, and available alternatives differ between destinations and sometimes within the same area. GLINT could help people consult destination-specific guidance, understand precautions that may be relevant, and plan appropriate arrangements before they leave. Once there, the same feature could help them locate alternatives or adjust their plans as circumstances change.

Reliable information is essential to the service. Destination guidance should be connected to identifiable, current sources, while refill-location listings must remain distinct from assurances about water safety. GLINT does not test or purify drinking water, and a location appearing on a map is not a guarantee that its water is suitable to consume.

GLINT REFILL belongs to the GLINT experience itself. Partners may eventually contribute additional local knowledge or practical services, but access to the core feature should not depend on a particular partnership.

Like every connected GLINT function, it remains optional. The person chooses when to search, what information to consider, and what to do next.

The bottle carries what you choose. The app helps you find what you need next.

SET YOUR RHYTHM

The GLINT app is designed as a control surface, not another destination demanding attention. Its purpose is simple: allow the person to shape how GLINT fits into their life, set those preferences, and then step away.

A reminder can begin with a specific time or a chosen interval. Someone might want a gentle cue every two hours while working, a different rhythm during training, or no reminder at all on a day when they would rather move without one. GLINT does not decide the correct schedule. The person sets the rhythm.

From the app, light and sound can be adjusted independently. The visual signal can be turned on or off, while sound can remain silent or be paired with a selected atmosphere—water, ocean, rain, nature, soft resonance, frequency-based tones, or a personally chosen sound. These are not instructions for how the moment should feel; they are possibilities for shaping it.

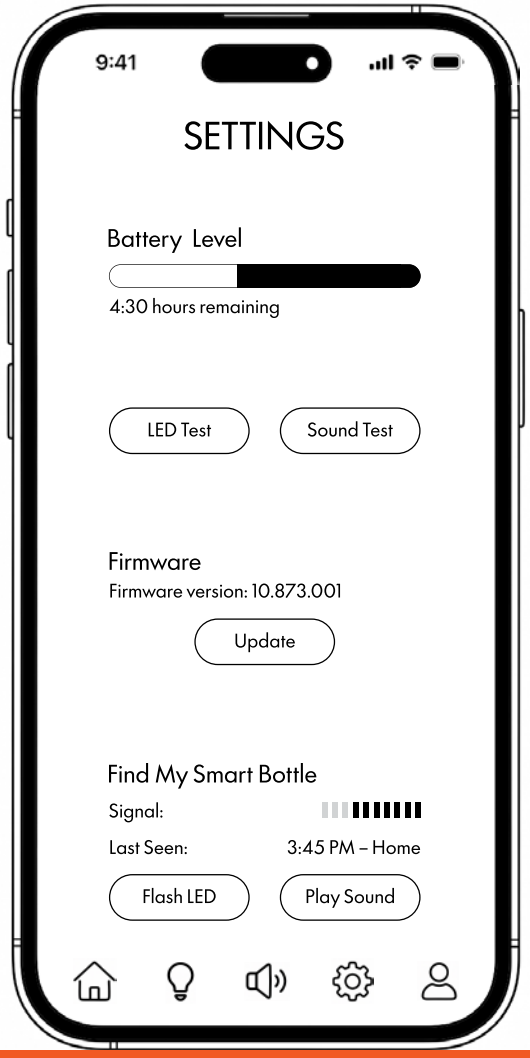

The app also provides the practical information a connected object needs: battery status, firmware updates, signal testing, and tools for locating the bottle. These functions stay quietly in the background until they are useful.

For people who want to understand their own patterns, GLINT can also reflect recent activity and offer optional suggestions based on the rhythm they have already established. Those suggestions are never requirements. A goal, if used at all, is chosen by the person—not assigned by GLINT.

The wearable version keeps only what matters in motion: the next reminder, quick interval adjustments, light and sound controls, and the ability to acknowledge the signal directly from the wrist. It allows GLINT to stay connected without requiring a phone to stay in the hand.

Beyond personal settings, the app can also provide access to GLINT REFILL as a separate, on-demand service. Someone might consult drinking-water guidance while planning a trip, explore refill opportunities in an unfamiliar neighborhood, or look for an alternative when an intended stop is no longer available.

As the service develops, GLINT could also help people ask practical questions about their destination or

changed circumstances, presenting relevant information and options when dependable sources are available. The intention is not to become a travel assistant that manages every decision. It is to make useful drinking-water information easier to access at the moment someone needs it.

The aim is not to create more screen time. Everyday preferences can quietly continue in the background, while additional assistance remains available when requested. GLINT does not need to anticipate every move or decide what happens next.

Set it. Change it. Ignore it. Return when you want. The app adapts to the person—not the other way around.
